

PRIME STEP

Premium Footwear Website

Project Documentation

A multi-page static web application for browsing and showcasing premium footwear products.

Document Type: Academic / Project Submission

Project Type: Front-End Web Application

Primary Technologies: HTML5, CSS3, JavaScript

1. Project Introduction

PRIME STEP is a front-end website project for a premium footwear brand. The site presents the brand identity, product categories, a shoppable-style product collection, brand story content, and a contact channel for customers.

The application is implemented as a static multi-page website using HTML, CSS, and JavaScript. It consists of four main pages: Home (`index.html`), Shop (`shop.html`), About (`about.html`), and Contact (`contact.html`). Shared visual styling is provided through a base stylesheet, with additional page-specific stylesheets.

The brand tagline used across the site is: *"Premium footwear for every step of your journey."* The home page hero message is: *"Step into Style — Premium footwear crafted for comfort and performance."*

2. Project Background

According to the About page content, PRIME STEP was founded with the vision to bring style, comfort, and quality to every step. The brand states that every shoe tells a story, and its curated collection is intended to help customers walk confidently in style.

The stated mission is to provide footwear that combines modern design with exceptional comfort. The collection ranges from casual sneakers to formal shoes, with an emphasis on quality that supports everyday wear.

The About page also lists reasons to choose the brand: premium quality at affordable prices, a wide range of styles for different occasions, a customer-first service approach, and eco-conscious materials with ethical sourcing.

3. Problem Statement

The project addresses the need for an online brand presence where customers can discover footwear products, learn about the brand, and make contact. Without a structured website, a footwear retailer would lack a clear digital channel to present product categories, promotional messaging, service commitments (such as shipping and returns), and customer communication.

This documentation is based on the implemented front-end solution. The project does not include a formal written problem-analysis document beyond what can be inferred from the implemented pages and content.

4. Project Objectives

Based on the implemented system, the project objectives are:

- Present the PRIME STEP brand identity and value proposition on a public website.

- Display featured and collection products with images, prices, color options, and badges.
- Provide an About section describing brand story, mission, and differentiators.
- Enable users to send inquiries through a contact form and view store contact details.
- Support usability features such as responsive navigation, dark mode, and newsletter signup UI.
- Communicate service benefits including free shipping (orders over \$50), easy returns (30-day policy), secure payment messaging, and 24/7 support messaging.

5. Project Scope

5.1 In Scope

- Four static HTML pages: Home, Shop, About, and Contact.
- Shared and page-specific CSS styling, including dark mode styles.
- Client-side JavaScript for dark mode persistence, mobile menu, countdown timer, and reviews slider.
- Product presentation with external product images (Unsplash).
- Contact form UI fields: name, email, subject, and message.
- Embedded Google Map on the Contact page and an embedded YouTube video on the About page.
- Newsletter subscription form UI on multiple pages.

5.2 Out of Scope (Not Implemented in the Project)

- Server-side backend, authentication, or user accounts.
- Database-backed product inventory or order management.
- Actual payment processing or checkout workflow.
- Functional cart persistence beyond UI elements (for example, cart icon / Add to Cart buttons without backend).
- Server-side handling of contact form or newsletter submissions.

6. Target Users

The site content indicates the following user groups:

- **General customers** seeking premium footwear for casual, sport, and formal occasions.
- **Men's and women's shoppers**, as referenced in footer shop links (Men's Shoes, Women's Shoes).
- **Prospective buyers** interested in new arrivals, best sellers, sales, and promotional countdowns.

- **Visitors seeking brand information** via the About page story, mission, and video.
- **Customers needing support**, including order inquiries, customer support, and product feedback through the Contact page.

7. System Features and Functions

7.1 Home Page Features

- Hero section with headline, subtitle, and call-to-action buttons (Contact Us, Learn More).
- Stock cooldown countdown timer (client-side, two-hour target from page load).
- Customer reviews slider with auto-scroll and pause on hover.
- Featured product categories: Sneaker (Nike Low, RM250.00), Sport (Adidas Originals, RM499.99 from RM559.99), Formal (Cole Haan Oxfords, RM149.99).
- Service feature cards: Free Shipping, Easy Returns, Secure Payment, 24/7 Support.
- Newsletter subscription form.
- Dark mode toggle with localStorage persistence.
- Mobile navigation toggle.

7.2 Shop Page Features

- Product collection grid titled "Our Collection".
- Products: Sport Trainers (RM 130, NEW), Leather Boots (RM 220 from RM 250, SALE), Canvas Sneakers (RM 90), High Heels (RM 150, POPULAR).
- Color option indicators and Add to Cart buttons.
- Newsletter form and dark mode support.

7.3 About Page Features

- About hero title section.
- Embedded YouTube story video ("Watch Our Story").
- Our Story, Our Mission, and Why Choose Us content.
- Scroll-triggered fade-in animations.
- Newsletter and dark mode support.

7.4 Contact Page Features

- Contact form with Name, Email, Subject (Order Inquiry / Customer Support / Product Feedback), and Message.
- Contact information: location (123 Shoe Street, Kuala Lumpur, 50450), phone (+60 3-1234 5678, Mon–Fri 9am–6pm), emails (hello@primestep.com, support@primestep.com).
- Embedded Google Map centered on Kuala Lumpur.

- Dark mode and mobile menu support.

7.5 Cross-Cutting Features

- Consistent site navigation: Home, Shop, About, Contact.
- Footer sections for Shop and Company links, social media icons (Instagram, Twitter, Facebook, TikTok), and legal links.
- Font Awesome icons for UI elements.

8. System Requirements

The project is a static website and can be viewed by opening the HTML files in a modern web browser or by serving them through any static file host. No application server or database server is required for the current implementation.

Network access is required for external resources used by the site, including Font Awesome CDN stylesheets, Unsplash product/hero images, the YouTube embed, and the Google Maps embed.

9. Software Requirements

Component	Requirement
Web browser	Modern browser with HTML5, CSS3, and JavaScript support (for example Chrome, Firefox, Edge, or Safari)
Operating system	Any OS capable of running a modern web browser
Optional local server	Any static file server (optional; pages can also be opened directly)
Internet connection	Required for CDN assets, images, YouTube, and Google Maps
Developer tools (optional)	Code editor and browser developer tools for maintenance

Table 1. Software requirements

10. Hardware Requirements

The project does not define formal hardware specifications. As a static front-end website, typical client hardware capable of running a modern web browser is sufficient. Recommended practical requirements for comfortable use:

- Desktop, laptop, tablet, or smartphone device.
- Display resolution suitable for responsive web layouts.
- Stable network connection for loading external media and CDN resources.

No dedicated server hardware is required for the current static deployment model.

11. Technologies Used

Technology	Role in the Project
HTML5	Page structure and semantic content for Home, Shop, About, and Contact
CSS3	Visual design, layout, animations, responsive rules, and dark mode styling
JavaScript (vanilla)	Dark mode toggle and persistence, mobile menu, cooldown timer, reviews slider, About page scroll animations
Font Awesome 6	Icons for navigation, features, social links, and contact details (CDN)
Unsplash images	Hero backgrounds and product images referenced by URL
YouTube embed	Brand story video on the About page
Google Maps embed	Location map on the Contact page
localStorage API	Persists dark mode preference across page loads

Table 2. Technologies used

11.1 Stylesheet Organization

- `assets/base.css` — reset, container, header/navigation, buttons, and base dark mode rules.
- `assets/index.css` — Home page hero, cooldown, reviews, products, features, newsletter, and footer styles.
- `assets/shop.css` — Shop collection layout, product cards, badges, and shop-specific theming.
- `assets/about.css` — About hero, video section, about content, and related animations.
- `assets/contact.css` — Contact-oriented styles (also present as a dedicated stylesheet in the project).
- Contact page also contains substantial inline CSS in `contact.html`.

12. System Design

The system is designed as a multi-page static website with a consistent navigation shell. Each page loads shared base styles where applicable, then page-specific styles, and client-side scripts for interactive behavior.

Design characteristics observed in the implementation include:

- Brand-forward presentation with a prominent hero on the Home and About pages.
- Card-based product and feature presentation on Home and Shop pages.

- Accent color usage around coral/red tones (for example #e63946 / #ff6b6b) with dark neutrals.
- Poppins font family declared in the base stylesheet.
- Sticky header navigation with active-link indication.
- Responsive grid layouts using CSS Grid and media queries (notably on Contact and Shop).
- Light/dark appearance modes controlled by a dark-mode class on body.

13. System Architecture

The architecture is a client-side presentation layer only. There is no application backend, API layer, or database in the repository.

13.1 Logical Structure

Layer	Contents
Presentation (HTML)	index.html, shop.html, about.html, contact.html
Styling (CSS)	base.css, index.css, shop.css, about.css, contact.css (+ inline CSS on contact page)
Behavior (JS)	assets/index.js (shared behaviors); inline scripts on About and Contact pages
External services	Font Awesome CDN, Unsplash image URLs, YouTube, Google Maps
Browser storage	localStorage key darkMode for theme preference

Table 3. Logical architecture layers

13.2 Page Navigation Model

Users move between pages through standard hyperlink navigation in the header (and selected footer links). The Home page CTAs link to Contact and About. Featured product CTAs link to the Shop page.

14. Use Case Information

The project does not include formal UML use-case diagrams. The following use cases are derived from the implemented user interface and scripts.

Use Case	Actor	Description
Browse home content	Visitor	View hero, cooldown, reviews, featured products, and service features
Browse shop collection	Visitor	View product cards with prices, colors, and badges

Use Case	Actor	Description
Learn about brand	Visitor	Read story/mission content and watch embedded video
Submit contact message	Customer	Fill contact form fields and submit (UI only; no server handler in project)
View location	Customer	Inspect contact details and embedded map
Toggle dark mode	Visitor	Switch theme; preference saved in localStorage
Use mobile menu	Mobile visitor	Open/close navigation links on smaller screens
Subscribe to newsletter	Visitor	Enter email in newsletter form UI
Add to cart (UI)	Shopper	Click Add to Cart on Shop products (button present; no cart backend implemented)

Table 4. Derived use cases from implemented UI

15. Process / User Flow Information

No dedicated flowchart diagrams exist in the project repository. The primary user flows observable from the pages are summarized below.

15.1 Typical Browsing Flow

- Enter via Home → review brand message and featured categories → open Shop for full collection → optionally open About for brand story → optionally open Contact for inquiries.

15.2 Dark Mode Flow

- User clicks mode toggle → script toggles `body.dark-mode` → stores boolean in `localStorage.darkMode` → on later visits, script restores preference.

15.3 Stock Cooldown Timer Flow (Home)

- On page load, script sets a target time two hours ahead → updates display every second as HH:MM:SS → when elapsed, shows “Cooldown Finished!”.

15.4 Contact Inquiry Flow

- User opens Contact → completes Name, Email, Subject, Message → clicks Send Message. Form fields are marked required in HTML. The project does not include a server-side endpoint or confirmation workflow beyond the form markup.

16. Data Information

There is no database schema or backend data model in this project. Product information, reviews, and contact details are hard-coded in HTML.

16.1 Client-Side Stored Data

Key	Storage	Purpose
darkMode	localStorage	Stores 'true' when dark mode is enabled; restored on page load

Table 5. Client-side data

16.2 Hard-Coded Product Data (Examples)

Page	Product	Price (as shown)	Badge / Notes
Home	Nike Low	RM250.00	SNEAKER
Home	Adidas Originals	RM499.99 (was RM559.99)	SPORT / sale
Home	Cole Haan Oxfords	RM149.99	FORMAL / sale
Shop	Sport Trainers	RM 130	NEW
Shop	Leather Boots	RM 220 (was RM 250)	SALE
Shop	Canvas Sneakers	RM 90	—
Shop	High Heels	RM 150	POPULAR

Table 6. Product information embedded in HTML

16.3 Contact Form Fields

Field	Type	Notes
name	text	Required
email	email	Required
subject	select	Order Inquiry / Customer Support / Product Feedback; required
message	textarea	Required

Table 7. Contact form fields

17. User Interface / System Screens

The project does not contain saved screenshot image files. The following screen descriptions are based on the HTML structure and styling present in the source files.

17.1 Home Screen

- Sticky header with logo “PRIME STEP”, navigation links, dark mode button, and mobile menu button.
- Full-width hero with headline “Step into Style”, subtitle, and primary/secondary CTAs.
- Countdown banner (“Clear Stock Cooldown!”).
- Customer Reviews cards in a horizontal auto-scrolling slider.
- Category Product grid with three featured cards and “View All” link to Shop.
- Four service feature cards and a newsletter panel.
- Multi-column footer with brand, shop, company, social, and legal links.

17.2 Shop Screen

- Header navigation with Shop marked active.
- “Our Collection” heading and responsive product grid of four items with badges, images, colors, prices, and Add to Cart buttons.
- Newsletter section and a minimal footer variant.

17.3 About Screen

- Hero banner titled “About PRIME STEP”.
- “Watch Our Story” video embed section.
- Content blocks for Our Story, Our Mission, and Why Choose Us list.
- Newsletter and standard footer.

17.4 Contact Screen

- Page title “Contact PRIME STEP”.
- Two-column layout (stacks on mobile): message form and contact information cards.
- Full-width embedded map section beneath the contact grid.
- Footer with brand, shop, and company columns.

18. System Implementation

18.1 Implementation Approach

The website is implemented as separate HTML documents with linked CSS and JavaScript assets. Shared interactive behavior for Home and Shop is centralized in `assets/index.js`. About and Contact pages include page-local script blocks for dark mode and related interactions.

18.2 Key Implementation Details

- **Dark mode:** toggles a CSS class and persists state with `localStorage.setItem('darkMode', ...)`.
- **Mobile menu:** toggles an active class on `.saas-nav-links`.
- **Cooldown timer:** calculates remaining time against a Date object offset by two hours and updates an element with id `cooldown-timer`.
- **Reviews slider:** duplicates slider content and auto-increments `scrollLeft`; pauses on mouse enter.
- **About animations:** IntersectionObserver adds a fade-in class when content enters the viewport.
- **Accessibility affordances:** aria-labels on toggles/menus; focus outline styles on contact form controls.

18.3 Project Source Layout

Path	Description
index.html	Home page
shop.html	Shop / collection page
about.html	About / brand story page
contact.html	Contact form, info, and map page
assets/base.css	Shared base styles
assets/index.css	Home page styles
assets/shop.css	Shop page styles
assets/about.css	About page styles
assets/contact.css	Contact stylesheet file
assets/index.js	Shared client-side behaviors
README.md	Present in repository but currently empty

Table 8. Source file responsibilities

19. Testing

The repository does not include automated test suites, test plans, or recorded test results. Based on the implemented features, the following manual checks are appropriate for verification:

Area	Suggested Manual Check
Navigation	Verify Home, Shop, About, and Contact links open the correct pages
Dark mode	Toggle theme and confirm preference persists after reload
Responsive layout	Resize viewport / use mobile device width; verify menu toggle and stacked layouts
Home timer	Confirm countdown updates and completion message appears after expiry
Reviews slider	Confirm auto-scroll and pause on hover
Forms	Confirm required-field browser validation on Contact and Newsletter inputs
External embeds	Confirm map and video load when online
Product display	Confirm images, prices, badges, and color indicators render

Table 9. Suggested manual testing checklist (not project-supplied results)

20. Results / Expected Outcomes

The completed front-end delivers a branded multi-page footwear website with the following observable outcomes:

- Users can navigate between Home, Shop, About, and Contact.
- Product offerings and promotional messaging are visible without a backend.
- Brand story content and media embeds support marketing presentation.
- Contact details and a message form provide a customer communication interface.
- Dark mode and responsive navigation improve basic usability across devices.

Quantitative performance metrics, user study results, or deployment analytics are not included in the project materials.

21. Limitations

- No backend: contact and newsletter forms do not persist or send data through a server in this codebase.
- No real e-commerce checkout, payment gateway, inventory sync, or order tracking.
- Add to Cart / bag icon elements are present as UI only.
- Product and review content is static HTML, not dynamically managed.
- README.md is empty, so repository-level setup documentation is limited.
- Some footer and shop category links use placeholder # anchors and are not fully wired to filtered views.
- External dependency on third-party CDNs and image/video hosts; offline viewing of those assets is limited.

- No formal UML diagrams, database design, or automated tests are supplied in the project.

22. Future Improvements

The following improvements are logical extensions of the current front-end. They are suggestions based on missing capabilities in the existing project, not features already implemented.

- Add a backend API and database for products, orders, and contact message handling.
- Implement a functional shopping cart and checkout process.
- Wire newsletter subscription to an email service provider.
- Replace placeholder footer/category links with real filtered shop pages.
- Centralize scripts to avoid duplicated dark-mode logic across pages.
- Add automated UI tests and complete the README with setup and run instructions.
- Improve accessibility further (for example, skip links, fuller keyboard navigation testing).

23. Conclusion

PRIME STEP is a completed front-end website project that presents a premium footwear brand through Home, Shop, About, and Contact pages. It demonstrates practical use of HTML structure, modular CSS styling, and client-side JavaScript interactions such as dark mode, mobile navigation, a promotional countdown, and a reviews slider.

The system successfully communicates brand identity, product offerings, service messaging, and contact channels. Its primary constraint is the absence of backend services for commerce and form processing. Within the scope of a static web presentation project, the implementation provides a coherent and usable brand website foundation.

24. References

The following references are resources actually used by or present in the project. No external academic citations were supplied in the repository.

- Project source files: `index.html`, `shop.html`, `about.html`, `contact.html`, and files under `assets/`.
- Font Awesome (CDN): `cdnjs.cloudflare.com` Font Awesome 6 stylesheets referenced by the pages.
- Unsplash: external image URLs used for heroes and products.
- YouTube: embedded video on the About page.
- Google Maps: embedded map on the Contact page.

No additional bibliography exists in the project README or documentation files.

25. Appendix — Project File Structure

Directory structure of the project as documented from the repository:

```

```

25.1 Document Notes

- This PDF was produced for academic/project submission purposes.
- Content is based solely on information present in the project source and UI copy.
- Sections without formal project artifacts (for example UML diagram files, test reports, or database schemas) are either summarized from implementation or explicitly noted as unavailable.
- No existing project source files were modified to produce this documentation.
